

Solve each problem.

1) $\frac{5}{6} - \frac{1}{3} =$

2) $\frac{1}{2} + \frac{2}{5} =$

3) $\frac{5}{7} - \frac{3}{9} =$

4) $\frac{2}{3} + \frac{4}{9} =$

5) $\frac{4}{5} - \frac{3}{6} =$

6) $\frac{7}{10} + \frac{1}{2} =$

7) $\frac{3}{5} - \frac{1}{2} =$

8) $\frac{2}{5} + \frac{2}{9} =$

9) $\frac{4}{8} - \frac{1}{2} =$

10) $\frac{1}{2} + \frac{1}{6} =$

Answers

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
9. _____
10. _____

Solve each problem.

1) $\frac{5}{6} - \frac{1}{3} = \frac{15}{18} - \frac{6}{18} = \frac{9}{18}$

2) $\frac{1}{2} + \frac{2}{5} = \frac{5}{10} + \frac{4}{10} = \frac{9}{10}$

3) $\frac{5}{7} - \frac{3}{9} = \frac{45}{63} - \frac{21}{63} = \frac{24}{63}$

4) $\frac{2}{3} + \frac{4}{9} = \frac{18}{27} + \frac{12}{27} = \frac{30}{27}$

5) $\frac{4}{5} - \frac{3}{6} = \frac{24}{30} - \frac{15}{30} = \frac{9}{30}$

6) $\frac{7}{10} + \frac{1}{2} = \frac{14}{20} + \frac{10}{20} = \frac{24}{20}$

7) $\frac{3}{5} - \frac{1}{2} = \frac{6}{10} - \frac{5}{10} = \frac{1}{10}$

8) $\frac{2}{5} + \frac{2}{9} = \frac{18}{45} + \frac{10}{45} = \frac{28}{45}$

9) $\frac{4}{8} - \frac{1}{2} = \frac{8}{16} - \frac{8}{16} = \frac{0}{16}$

10) $\frac{1}{2} + \frac{1}{6} = \frac{6}{12} + \frac{2}{12} = \frac{8}{12}$

Answers

1. $\frac{9}{18}$
2. $\frac{9}{10}$
3. $\frac{24}{63}$
4. $\frac{30}{27}$
5. $\frac{9}{30}$
6. $\frac{24}{20}$
7. $\frac{1}{10}$
8. $\frac{28}{45}$
9. $\frac{0}{16}$
10. $\frac{8}{12}$
